Projects

Barangay Management System Personal Project Ongoing (React-native, React+Vite Libraries, NodeJs, and MySql)	Developed a web-based system for resident profiling, certificate generation, and QR code encryption for document authentication. Enabled A4-size PDF downloads of generated certificates with embedded encrypted QR codes, ensuring secure and efficient management of barangay records.
Redesign Launchpad Website Intern Project (Figma)	Redesign the UI of the main websites of the Company using Figma.
Chat System Intern Project Unaccomplished (PHP, HTML, JS, and Ajax)	Developed a web-based chat system for secured chat in the Launchpad.
Wi-fi Access Control System for Learnings of Students Capstone Project (React+Vite Libraries, NodeJs, and RouterBoard)	Developed a web-based system for secured Wi-Fi access in CICS by configuring a MikroTik router and integrating API-based user authentication. Implemented user access control and blacklist management to enhance network security and ensure efficient user management.

Booking System Course/Subject Project (ASP.net Frameworks, .net MAUI)	Developed a web-based and mobile-based application using the ASP.NET framework with C#. The web-based system supports full CRUD functionalities for managing rooms, while the mobile version is limited to viewing available rooms.
